Hav Ing explained the first six books of EUclid, with the eleventh and twelfth, which may serve for geometrical elements; and having also taught the plain Trigonometry; we are now to subjoin some corollaries which are easily deduced from them, that contain practical rules of great use in the affairs of life, concerning the mensuration of lines, angles, surfaces, and solids. This treatise of practical Geometry is divided into three parts. In the first, we treat of the mensuration of lines and angles; to which we have subjoined Surveying. In the second, we treat of surfaces; not of such as fire plain only, but of some curve surfaces A likewise 5 likewise; as of the surface of the cylinder, cone, and sphere; and of those parts of the sphere which we have frequently occasion to consider. It is shewn how to express the area of these in the superficial measures that, are now in use amongst us. The third part treats of solid figures and their mensuration. After deducing the rules for finding the solid content of the parallelepipedon, prism, pyramid, cylinder, cone, and c. from Euclid; we add, from Archimedes, the mensuration of the sphere and spheroid, and of their segments, demonstrated in an easy manner; from whence a method is derived for finding the contents of vessels that are either full, or in part empty, in the wet, as well as the dry measures, that are now...
